

# Teaching Mobile Computing through Developing Educational Applications

Marco Aurelio Nuño-Maganda\*

Information Technology Engineering & Master in Engineering Departments

\*Universidad Politécnica de Victoria, Ciudad Victoria, Tamaulipas, México

## Introduction

## Introduction

Mobile programming is an topic in computer science due to recented advances in mobile technology

- Flatbed scanners
- Commercial automatic scanners

In this work, an image processing system for automatic book segmentation is proposed.

1. Illumination System
2. Book Scanning Support
3. Camera
4. Processing Platform
5. Mechanical Page Turner

Processing steps:

- \*\* Pre-processing step: required in order to prepare the image to be analyzed: Image downsampling, color-conversion, filtering, morphological, edge detection
- \*\* Geometrical processing step: required to find the location of each book page. It includes:
